## About Us

Down Creators was created in 2005 with the aim to become the European centre of competence in processing down and feathers by investing in new technology. Since the beginning the company has known a steep growth leading it to be one of the main European exporters of high quality down to Asia for leading luxury brands.

With our in-house developed technology, we are able to reach the highest quality standards in a sustainable way with attention for the environment around us.

It is this competence and technological expertise that we now use to produce bedding products of the finest quality. Being specialised in the production of high-quality European down, we can guarantee that all our bedding products are filled with down according to the exact quality levels following the European Norms.

*“Down is our passion, quality is our guarantee”*

# How to Understand Down Quality

All the different down qualities and technical specifications can be difficult to understand for someone who is not an expert. For this reason we like to quickly explain some of the most important technical characteristics to let you know what you're dealing with.

## Fill Power

Fill Power is the most important indicator when choosing a duvet. This indicates how much volume a certain amount of down takes. The higher the fill power, the more volume the down takes in the duvet.

In general, the Fill Power can range from 300 for feathers to 900 for the highest quality Goose down.

## Turbidity

Turbidity indicates the cleanliness of the down and feathers (the amount of organic dust that is present). European Norms require a minimum of 350mm while very clean down starts at 550mm up to 1000mm.

**All down used in our products are guaranteed 1000mm Turbidity!**

## EN 12934

All down and feathers used in our products are collected from duck and geese according to the European Norm EN 12934 and with utmost respect for animal welfare.

Down is one of nature's most fine and prestigious insulators. Due to its specific structure and thermal characteristics it allows ducks and geese to survive in environments of +50 °C to -50° C. No other animals on the world are able to survive such extreme conditions, except a hand full of animals that have down as natural insulator.

It is this ability to regulate temperature and humidity that makes down such a special filling material and the preferred product for an optimal night of sleep! With its high volume to weight ratio and its extreme fluffiness, sleeping under a natural down duvet truly feels like sleeping in a cloud with angels.

Every tube contains 1gr. of duck down

# A Duvet for Every Temperature

**Winter:** Our winter duvets have a warmth scale of 6 or 7 and a filling weight of 250gr/m<sup>2</sup> and higher. These duvets will keep you warm during cold winter nights and are perfect for room temperatures below 18° C or for those who tend to be cold at night.

**All-Season:** With our All-Season duvets we provide the perfect balance between warmth and comfort so it can be used all year round. Depending on the down quality and filling weight these duvets range between 3 and 5 on our warmth scale. Our All-Season duvets are perfect for room temperatures between 18 – 22° C and moderate climates.

**Summer:** Light and comfortable, our summer duvets are filled with 65 – 150gr/m<sup>2</sup>. The lower filling weight will keep you covered and regulate your body temperature without overheating. Our Summer duvets are perfect for room temperatures above 22° C and for people who tend to be too warm at night.

	WINTER	ALL-SEASON	SUMMER
Room temperature	18°C and lower	18 – 22°C	22°C and higher
Filling weight / m <sup>2</sup>	400 - 250gr	250 - 150gr	150 - 65gr
Warmth class	7 - 6	5 - 4 - 3	2 - 1

Every body temperature, season, and room temperature requires a different duvet. There are two criteria that can be considered in choosing your duvet, the quality of the down filling (fill power), and the filling weight used in the duvet. The higher the fill power, the higher the ability of the down filling to insulate, and thus to keep you warm. And accordingly, the higher the filling weight, the higher the warmth of the duvet.

## Technical Aspects

Cotton for  
Comfort

All our down products are 100% natural inside out! For the outer fabric of our collections we use a special selection of downproof cotton percale, extra soft cotton percale and cotton sateen. The high quality natural downproof cotton blocks all down fibres from leaving your duvet to ensure a perfect night of sleep.

Anti - Allergy

Our bedding products provide a twofold protection against dust mite. The specific high thread count of our cotton fabrics does not only block down fibres to come out of the duvet, it also stops dust mite from passing through the fabric, preventing a build-up of dust mite in your pillow and duvet. Secondly, all our duvets and pillows are machine washable at 40°C. This effectively eliminates all dust mite that might be on the cover of your bedding products.

Our down and feather bedding is machine washable at 40°C and can be dried in a tumble-dryer according to the washing instructions. Professional dry-cleaning is possible. Down and feather products should not be bleached or ironed.

Easy Care

All our products are are manufactured in Europe, using only European down and feathers of the highest quality. All down and feathers are processed at our own processing facility, after which they receive a final quality check by our highly trained staff in our laboratory. With this we ensure that every product has the quality which is promised!

Made in  
EU

## Our Promise of Quality

With our own fully equipped laboratory right next to the production facility we have all the necessary testing devices needed to perform the quality control on each step of the production process. Our team is trained in two most reputed down and feather quality centers in the world – IDFL Switzerland and QTEC Japan.

### OEKO-TEX Certificate

All the materials we use in our products are OEKO-TEX Standard 100 certified in class 1. To put it simple, this is the most important international control system to guarantee that all the materials that are used in our products are safe for close to skin contact.

### RDS Responsible Down Standard

All our products are RDS certified. This guarantees that our bedding products contain down and feathers only from certified farms. It ensures that the filling material used in our bedding products derives from geese and ducks raised in compliance with the principles and criteria of animal welfare.

### DownPass Certificate

All down fillings that we use are DownPass certified. This indicates that they are responsibly produced and come from strictly controlled and traceable supply chains. On top of that, all our down is sourced from European farms. Not only is the down quality better, the European legislation is the strictest in the whole world. This is how we ensure that all requirements for animal welfare are met to provide ethical down.

### IDFB Member

The International Down and Feather Bureau (IDFB) is the global trade association of the down and feather industry. By testing the material that goes into your down and feather, IDFB assures consumers that the down and feather is pure, sanitary and that it is derived as a byproduct of the food industry.

## How to Choose your Pillows

Like choosing your perfect duvet, choosing your pillow also needs some consideration! Depending on your sleeping position and your personal preferences different support might be needed. There are three main sleeping positions, each having its own preferred level of support that should be provided by your pillow. The choice of your pillow is important to keep your body aligned while at rest during the night. A good pillow adjusted to your sleeping position will prevent back, neck, and shoulder pains when waking up!

### Soft Pillow

**Stomach Sleeper:** 16% of all people sleep on their stomach. As a stomach sleeper a soft pillow will best meet your needs to cushion your head and neck in a comfortable angle without creating an unnatural upward bend of your spine.

### Medium Firm Pillow

**Back Sleeper:** 10% of all people sleep on their back. As a back sleeper, a medium support pillow will help you to keep your neck and back in a consistently neutral and comfortable position while on your back, providing a perfect alignment with your spine.

### Firm Pillow

**Side Sleeper:** 74% of the people sleep on their side. As a side sleeper, you do best with a firm pillow to keep your ears in line with your shoulders. This reduces the stress on your neck and brings your spine in a straight position.

# Royal Down Pillow

Sink away into dreamland and experience the sensation of a luxurious down pillow! The Royal down pillow is the absolute best in the category of high-quality down pillows. The combination of a fluffy 90% duck down filling with a soft cotton sateen casing gives it an ultra-soft sensation. The high fill power and recovery capacity give this pillow a beautiful volume and make it last for many years to come.
